

Troubleshoot Kubernetes Cluster

K8s : Troubleshoot Applications in K8s

K8s Troubleshooting

- Checking Pod Status
- Running Commands in Containers
- Hands On Demonstration

Checking Pod Status

- User can check pod Status, using kubectl
kubectl get pods
- Use kubectl describe to get more information, what is happening to unhealthy pod
kubectl describe pod <pod-name>

Run commands in Container

- User can Run Commands inside the container to get what is executing inside the container using kubectl.

kubectl exec <pod-name> -c <container-name> -- command

- Kubectl exec is not used to execute Software in container that is not present in container.

Hands On Demonstration

Thank You...

Don't be the Same! Be Better!!!
